SCREW ANCHOR WRENCH ACCESSORIES

For installing torques up to 10,000 ft.-lbs. A complete wrench consists of a Kelly Bar Adapter, Locking Dog, and Drive End.

- These installing wrenches are part of a complete system for installing screw anchors with power digging equipment.
- The wrench transmits the torque from the Kelly bar of the digger to the hub of the Power Installed Screw Anchor so that the anchor rod need be only large enough in diameter to support the guy load.
- Extension assemblies can be added where soil conditions dictate that anchors be set more than one rod length deep or where digger to ground clearances are limited.

KELLY BAR ADAPTER
